Code that becomes a value $\rightarrow$ expression

```python
def square(x):
    3  # literal expression
    2 + 1
    square(1.73)  # arg
```

name of function uses for what comes in $\rightarrow$ parameter $\rightarrow$ variable

Value that goes in $\rightarrow$ argument $\rightarrow$ value

Use a function $\rightarrow$ invoke call on arg pass in arg

End a function & give back a value $\rightarrow$ return

"the return value"
celebrating defined

prints 20 yays
Most functions:

```python
def my_def(arg):
    return a value at the end
```

don't use `print()` or `input()` anywhere

are in a file that only has function defs.
